# Let's practice!

INTERMEDIATE IMPORTING DATA IN PYTHON

# Herein, you'll learn

- What APIs are
- Why APIs are important
- In the exercises:
  - Connecting to APIs
  - Pulling data from APIs
  - Parsing data from APIs

# What is an API?

- Set of protocols and routines
- Bunch of code
  - Allows two software programs to communicate with each other

# What is an API?

- Set of protocols and routines
- Bunch of code
  - Allows two software programs to communicate with each other

# APIs are everywhere

# APIs are everywhere

Instagram  
API

# Connecting to an API in Python

```
import requests
url = 'http://www.omdbapi.com/?t=hackers'
r = requests.get(url)
json_data = r.json()
for key, value in json_data.items():
    print(key + ': ', value)
```

# What was that URL?

- http - making an HTTP request
- [www.omdbapi.com](http://www.omdbapi.com) - querying the OMDB API
- `?t=hackers`
  - Query string
  - Return data for a movie with title (t) 'Hackers'

```
'http://www.omdbapi.com/?t=hackers'
```

# OMDb API

## Usage

Send all data requests to:

`http://www.omdbapi.com/?`

# OMDb API

## Usage

Send all data requests to:

http://www.omdbapi.com/?

## Parameters

By ID or Title

Parameter	Required	Valid Options	Default Value	Description
i	Optional*		<empty>	A valid IMDb ID (e.g. tt1285016)
t	Optional*		<empty>	Movie title to search for.
type	No	movie, series, episode	<empty>	Type of result to return.

# It's a regular URL!

```
{
  "Title": "Hackers",
